8. 'Hazard' and 'Risk' aren't the same

8. 'Hazard' and 'Risk' aren't the same

Risk:

The likelihood that a tree or tree part will fail and cause injury or damage.

Hazard:

A tree or tree part that is likely to fail and cause damage or injury, and the likelihood exceeds an acceptable level of risk.

ISA 2006, Glossary of Arboricultural Terms, 2nd ed.

Risk and Hazard are not the same thing

Rischio e Pericolo non sono la stessa cosa

Risk:

The likelihood that a tree or tree part will fail and cause injury or damage.

Hazard:

A tree or tree part that is likely to fail and cause damage or injury, and the likelihood exceeds an acceptable level of risk.

Rischio:

La probabilità che un albero o una sua parte cada e provochi detrimento o danno

Pericolo:

Un albero (o una sua parte) che può cadere e causare detrimento o danno e la probabilità (che questo accada) supera un accettabile livello di rischio.
